

# Understand your security strengths and weaknesses, where you are at risk and see the path forward.

nowSecure Assess is a thorough, comprehensive review of your security infrastructure that leaves no stone unturned. This assessment, led by our experienced cybersecurity experts, helps you to determine what compliance and security controls are operating effectively.

Discover the weaknesses, vulnerabilities and gaps in your security infrastructure and armed with this information, formulate a robust strategy to strengthen and improve your protection.

## nowSecure Assess addresses security vulnerabilities in three key dimensions: People, Process, and Technology.

### ✓ PEOPLE

People could well be the weakest link in the security strategy. nowSecure Assess helps you discover and address gaps in cyber security processes and operational disciplines as well as looking at your awareness and training needs. Our aim is to drive the correct behaviours, so your people think about and operate in a more secure manner.

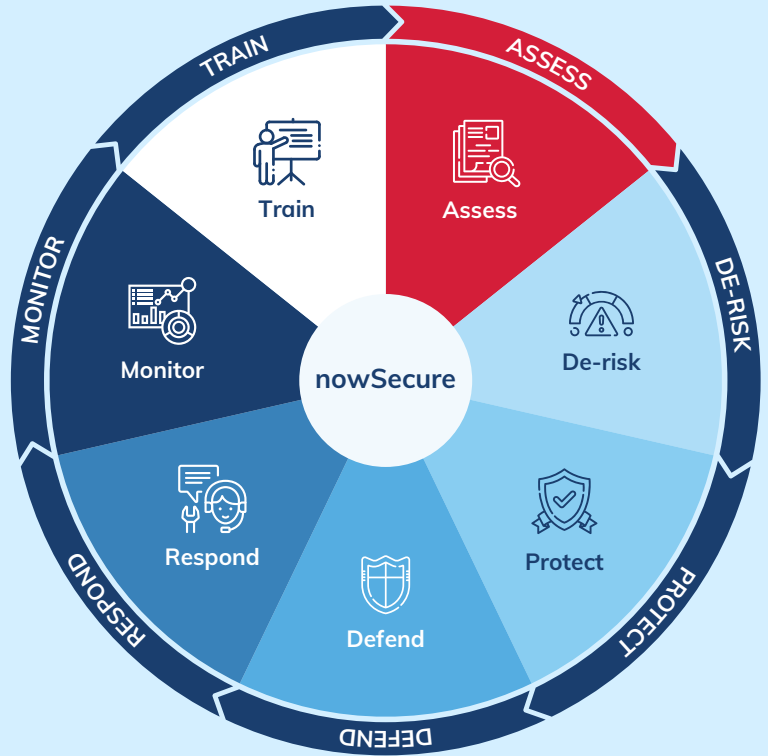

### ✓ PROCESS

IT business processes together with documentation and controls are key to maintaining a secure data environment. nowSecure Assess reviews your processes and identifies your security strengths and weaknesses. We then provide recommendations for improvements to your security posture.

### ✓ TECHNOLOGY

Most organisations have multiple layers of security technologies in place to protect the business from all the different types of attacks experienced "in the real world". nowSecure Assess provides a review of multiple technologies, techniques and processes that interact with each other to help maintain an adaptive security defence posture.

## Defence in depth with nowSecure Assess.

Receive a comprehensive face to face assessment with a cyber-security expert, based on industry best practice (NIST CSF).

Identify and fix vulnerabilities that can potentially be exploited by attackers with non-disruptive external vulnerability scan on all externally accessible systems protected by your firewalls.

Protect and tighten systems and application security with vulnerability testing from the inside of the network.

Protect remote workers with evaluation of the layers of endpoint security, general use of threat intelligence and cloud-based protection technologies.

Quickly determine strengths as well as opportunities for improvement with easy-to-understand report in red, amber and green format.

Your existing environment will be scored from one-10 (one is bad and 10 is excellent) broken down by the different layers of security in place.

Spring into action with a prioritised list of improvement recommendations based on our findings allowing you to focus on the most impactful changes you can implement to improve your security posture.

Try nowSecure Assess for 30 days. Fully managed trial. No obligation. →
