

nowSecure Monitor for discovery and prevention of compromised credentials on the Dark Web.

Today credentials and identities are the number one commodity traded on the Dark Web with sales increasing at an exponential rate.

The edges between work and home life are blurred, and the management of the sheer number of passwords is now overly complex, onerous and time consuming. Inevitably, as humans we revert to simplicity and use the same passwords everywhere or just change a few characters to make it different.

This common approach makes us all vulnerable to credential compromise.

Once a password is compromised the impacts can be far reaching, not only for the individual but also the company that employs the target victim.

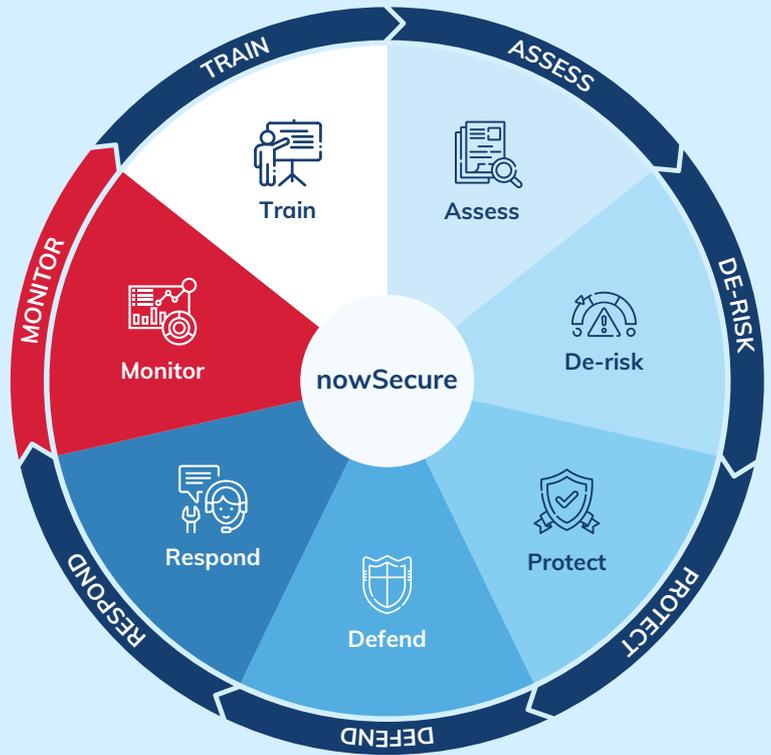

But companies often never find out what's been compromised until it's far too late.

nowSecure Monitor allows you to find out when emails and passwords leak onto the Dark Web.

Illicitly obtained digital credentials are the currency of choice on the Dark Web. Nealy 80 per cent of security breaches involve compromised passwords. But companies often never find out what's been compromised until it's far too late.

nowSecure Monitor is an intelligent platform that tracks – in real-time – whether anyone in your organisation has had their credentials compromised.

nowSecure Monitor uses vast search capabilities to monitor known hacker forums and IRC channels 24/7. Smart algorithms hunt tell-tale signs of compromised or stolen employee and customer data.

With nowSecure Monitor:

Real-time

Know precisely when you're vulnerable as it happens – right down to the visibility detailing the source of the leak.

Self Learning

Identify the most effective breach mitigation strategies to prevent the compromised credentials being used to create further damage and exfiltrate data, or to compromise financial accounts.

Advanced

Tap our expertise to bolster your defences leveraging the most advanced multi-factor authentication mechanisms, password mergers, and user cyber-awareness training.

Try nowSecure Monitor for 30 days. Fully managed trial. No obligation. →
