nowSecure Protect delivers compliance and cyber security for greater organisational agility wherever you work.

The need to support the new hybrid working model is paramount to organisations today. We must protect our applications and our users as well as the devices they are working from. We shouldn't compromise on security.

The ability to proactively protect the organisation and gain insight into security and compliance performance clearly can create an immense competitive advantage.

Leave the ongoing surveillance of your cyber security to the experts, whilst your competitors are stuck in the past. Adapt and minimise costs, and never lose focus on your business mission and purpose.

Choose nowSecure for for comprehensive next-gen network, virtual, cloud and endpoint protection.

- Deliver network blocking based on geolocation.

- Integrate local and remote network devices and data to protect everything, everywhere.

- Unify and push out security policy enforcement at even the largest scale.

- Apply threat intelligence to rapidly detect and counter sophisticated multi-pronged attacks.

- Gain deep insight into the attack types, how they entered the network and related footprints.

- Benefit from proactive hunting of emerging threats to ensure your protection remains optimised.

- Utilise services deployed and managed by Cisco Security experts round the clock.

nowSecure Protect enables you to detect and stop threats with our best of breed cybersecurity solutions powered by:
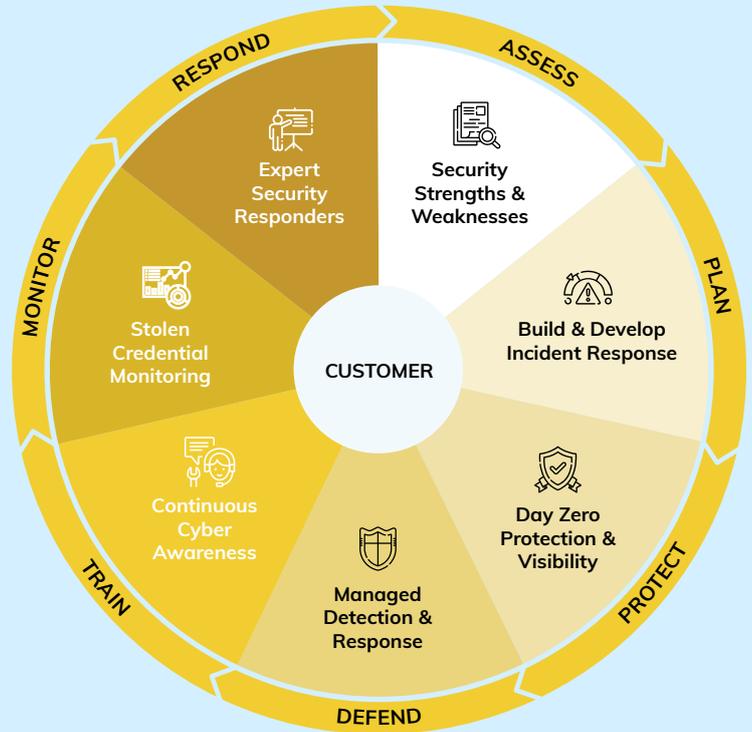

Secure Endpoint

Securely protect users regardless of location, stop malicious software with next generation antivirus and behavioural protection, investigate and remediate security incidents as well as automated isolation to provide rapid containment of attacks.

Umbrella

Cloud-delivered security when and how you need it. It combines multiple security functions into one solution, so you can extend protection to devices, remote users, and distributed locations anywhere.

Secure Access by Duo

Verify users' identities utilising two factor authentication, gain visibility into every device, and enforce adaptive policies to secure access to every application wherever it is located. Restrict access based on device and lock access to protected applications based on geolocation.
